No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         <del>4</del>3,

Sequence 5, Application US/09754250

Patent No. 637622

GENERAL INFORMATION:

APPLICANT: WELL MAING-Hui et al

TITLE OF INVENTION: ISOLATED HUMAN PHOSPHODIESTERASE

TITLE OF INVENTION: PHOSPHODIESTERASE PROTEINS, AND USES THEREOF

TITLE OF INVENTION: PHOSPHODIESTERASE PROTEINS, AND USES THEREOF

TITLE OF INVENTION: PHOSPHODIESTERASE PROTEINS, AND USES THEREOF

CURRENT APPLICATION NUMBER: US/09/754,250

CURRENT APPLICATION DATE: 2001-01-05

NUMBER OF SEQ ID NOS: 5

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 5

LENGTH: 921

TYPE: PRT

Sequence 43, Application US/0845526

Patent No. 5789525

GENERAL INFORMATION:
APPLICANT: Beavo, Joseph A.
APPLICANT: Bearley, Kelley
APPLICANT: Charbonneau, Harry
APPLICANT: Connenburg, William K.
TITLE OF INVENTION: DNA Encoding Mammalian
TITLE OF INVENTION: Phosphodiesterases
NUMBER OF SEQUENCES: 58
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GCCSLDAE 942
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       914 GCCSLDAE 921

Beavo JA; Sonnenburg WK, Charbonneau H,

WPI; 1995-090205/12.

N-PSDB; AAQ83974.

New nucleic acid encoding cyclic-GMP stimulated nucleotide phosphodi:esterase - and related vectors and transformed cells, useful for screening cpds. for phospho-di:esterase modulating activity.

Claim 1; Col 65-74; 69pp; English.

AAQ83974 encodes AAR69727 the bovine adrenal cortex cyclic-GMP stimulated nucleotide phospho-diesterase (CaM PDE) clone p3GCs-5. Eukaryotic cells that express CaM PDE can be used to screen cpds. for the ability to modulate CaM PDE activity. CaM PDEs are involved in regulating the transmission of information from hormones, neurotransmitters or other against CaM PDE can be used for enzyme purifen., or determination. (Updated on 25-MAR-2003 to correct PF field.)

This sequence represents the cyclic GMP stimulated phosphodiesterase (CGS -PDE) clone p3CGS-5 isolated from bovine adrenal cortex. The cyclic nucleotide phosphodiesterases (PDEs) catalyse the hydrolysis of 3', 5' cyclic nucleotides, such as cAMP and CGMP, to their corresponding 5'- cyclic nucleotide monophosphates. The PDEs are therefore important in the control of the cellular concentration of cyclic nucleotides. The PDEs control of the cellular concentration of cyclic nucleotides. The PDEs are, in turn, regulated by transmembrane signals or second messenger control in regulating the flow of information from extracollular hormones, concernamitters, or other signals that use the cyclic nucleotides as messengers. PDEs are present in most of the cells and tissues of cutaryotic organisms, but only in trace amounts. CGS-PDEs are stimulated by cGMP in effecting cAMP hydrolysis. This is thought to occur through a concatalytic cGMP-specific site present on the CGS-PDE. The cDNA encoding this sequence can be used for the production of recombinant CGS-PDE, which may have therapeutic and diagnostic uses. This protein may also be cuseful for diagnostic antibody production. (Updated on 25-MAR-2003 to
